Analysis

OF THE RESALE MARKET

Montréal Metropolitan Area

- OFF TO A GREAT START
- CALL OF THE SUBURBS
- LUXURY HOMES ON A ROLL
- WELL-INFORMED CONSUMERS

1ST Quarter

Chambre immobilière du Grand Montréal
Greater Montréal Real Estate Board

HOME TO CANADIANS
Canada

The GMREB has supplied its computer data, and Canada Mortgage and Housing Corporation its expertise in housing market analysis in order to make this publication possible.

OFF TO A GREAT START

Once again, the figures are very encouraging for the resale market. After five consecutive years of growth, this year posted another very promising start, as the first quarter showed a gain of 6 per cent in MLS® transactions for Greater Montréal, with exactly 9,894 resales. At the seasonally adjusted annual rate, this corresponds to 31,800 sales, a peak unequalled in over 10 years.

In terms of growth, small rental structures did particularly well, with the increase in such sales reaching 12 per cent between the first quarters of 2000 and 2001. The acquisition of a duplex or a triplex, for example, is an increasingly popular choice among first-time home buyers. For one thing, there are still some good buys on the market and, for another, it is becoming profitable again to invest in rental buildings, given the underlying growing scarcity of vacant units in the Montréal area. In fact, the vacancy rate should fall to only 1 per cent by the time of the next survey, in October.

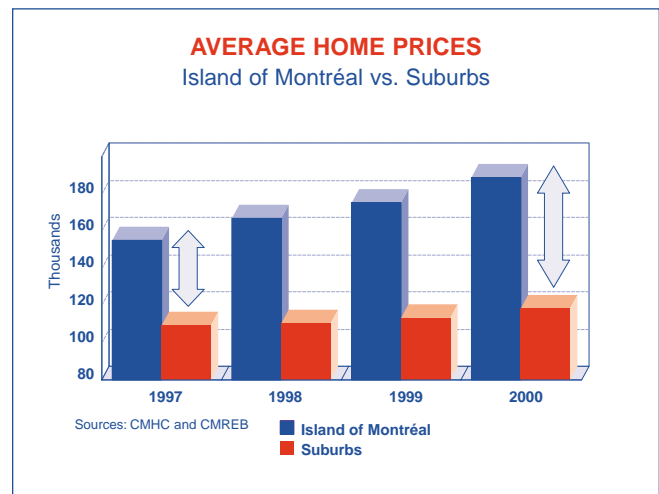

Condominium housing, for its part, performed just as well as rental buildings. Sales also went up by 12 per cent, which brought the seller-to-buyer ratio for such units to as low as 8 to 1. Contrary to plexes, for which this ratio stands at 11 to 1, condominiums have become a product that clearly favours sellers, where bargains are a thing of the past. As well, this is the housing type that has posted the strongest popularity gain in recent years with an average annual increase in sales of close to 25 per cent from 1996 to 2000.

Lastly, single-family housing will remain the most widely sold product but still its sales are rising at a slower pace than those of condominiums or plexes. Transactions went up by only 4 per cent in the first quarter, a result that is not very surprising considering that the seller-to-buyer ratio is tending to put buyers at a disadvantage. There are now just 7 sellers per buyer at the metropolitan area level, and this has led to a certain scarcity, which is already well rooted in certain market niches and sectors.

CALL OF THE SUBURBS

In the midst of the growth on the resale market, three years ago, single-family houses experienced renewed popularity on the Island of Montréal. In the wave that included the revitalization of the central sectors and the development of the new economy, the suburbs ended up with a smaller share of existing single-family home transactions.

This popularity on the Island caused the market to tighten significantly, to the point that there are now just 6 sellers for every buyer in this sector. The price gap between the Island and the suburbs consequently widened considerably, by over 50 per cent since 1997; as a result, the cost of a property has attained around \$185,000 on the territory of the MUC, compared to \$115,000 in the rest of the metropolitan area.

For the past year, though, a certain return of the pendulum has been observed. The suburbs are tending to win back their acclaim with a demand that, interestingly, is even more marked for the outlying sectors. Affordable prices in a context that still slightly favours buyers will have been a major incentive for many families. Others will have been especially attracted by the open door to the country afforded by such municipalities.

On the North-Shore, this phenomenon is evidenced by an increase in resales in most sectors, apart from the most central, namely, the MRC de Sainte-Thérèse de Blainville (zone 14). Both last year and in the first quarter of 2001, this part of the North-Shore was the only zone where the level of MLS® transactions went down. It should be noted that the average price of a home is \$140,000 in this sector, compared to an average of \$95,000 in the other municipalities.

And, on the South-Shore, the tendency to move further out was demonstrated by a growing demand for one of the most outlying sectors, that is, the zone comprising the municipalities situated along the banks of the Richelieu River (zone 20). The strongest growth in sales in the last 15 months was observed there, with an average price of about \$115,000, compared to \$130,000 more to the north on the South-Shore (in zones 17 to 19).

It should be noted that a similar phenomenon characterized the residential construction sector last year, as new housing posted renewed popularity in the suburbs. In this regard, the North-Shore, and especially Laval, were the sectors that posted the greatest increases in housing starts. As for the Island of Montréal, it was at a standstill in 2000, after playing catch-up for several years.

LUXURY HOMES ON A ROLL

Since 1998, a wind of renewal has been blowing over the upscale home market. During this period, the annual growth in sales for over \$250,000 reached an average of 26 per cent, while the rest of the home market posted a gain of just 3 per cent.

The state of these luxury single-family dwellings has therefore improved remarkably. In the middle of the decade, when the market bottomed out, there were close to 50 sellers per buyer for such houses, whereas this ratio has now fallen to 15 to 1. This makes for a product that still slightly favours buyers, but for which sellers have seen their negotiating power grow significantly. The rise in the stock market indices partly accounts for these results. From 1995 to 2000, the major Canadian index (TSE 300) provided an average annual rate of return of 14 per cent, a yield that attained 30 per cent in 1999. While a wave of wealth may have been felt at the time, the recent collapse will leave many perplexed, with the TSE having fallen by 35 per cent since it peaked in August 2000. Investors who recently arrived on the stock market place will likely want to review their great real estate dreams.

In addition to this financial reality, activity will also slow down due to the simple fact that the best deals have already found takers. The spectacular growth in upscale home sales was attributable to a catch-up effect, which will now give way to more "normal" increases, in accordance with the rest of the market.

Finally, let's see which are the major cities where these luxury properties are found and what is the state of their market. The following table sheds some light in this regard:

**UPSCALE HOME MARKET**

	Average Price	Buyers per sellers
ISLAND OF MONTRÉAL		
Westmount	534,000	7

1. from Du Parc to Atwater street

could be observed from now until the end of 2001, as the rate for a five-year term could even approach the 7 per cent mark. While economic growth could still slow down, even with this good news, a true decrease in activity seems less and less probable, with the recessionary scenario having now been deferred.

It should be noted that, with easier financing for consumers, this context directly contributed to the enviable performance achieved on the Montréal resale market in the first quarter. In fact, in the Conference Board of Canada confidence survey, households clearly suggested that the time was indeed better for the purchase of durable goods, such as a home.

This same survey revealed, however, that other factors are concerning the population. The percentage of families who feel that the situation will improve over the next six months, for example, fell to its lowest in five years. A wind of pessimism is therefore blowing over Quebec consumers.

WILL YOUR FAMILY BE IN A BETTER FINANCIAL POSITION IN SIX MONTHS?

Percentage of affirmative replies

WELL-INFORMED CONSUMERS

In recent months, economic news has been at the forefront in a very widespread manner, exceeding the usual coverage on specialized media. Households have therefore been confronted with a term that they thought they had forgotten: recession. What's the story here, as midyear approaches?

According to the latest news, there no longer is any risk of a recession during the current year thanks, in particular, to a rapid adjustment in interest rates in January. In fact, further decreases in interest rates

Apart from the mortgage rate decreases, economic conditions in the first quarter consequently generated a significant share of bad news. Job cut announcements began to re-appear in the news, whether at Air Canada, Nortel, Alstom, or the move of Costco's head office.

Combined with the ups and downs on the stock market, this news had the effect of a cold shower on consumer morale. The current situation can therefore be summed up as follows: households are buying, but they are concerned!

Notes on Tables and Graphs

Target Markets

The single-family house market encompasses detached, semi-detached and row houses of all types (bungalow, two-storey, split-level) owned under freehold (as opposed to condominium) tenure. The condominium market covers houses, apartments and plexes (structures with 2 to 5 units) held under divided co-ownership tenure. The plex market comprises small structures with 2 to 5 units, sold under individual co-ownership or freehold tenures. As a result, sales of cottages, mobile homes, farms and lands are not accounted for.

Market Zones

These zones are not the MLS® districts or zones used by the GMREB, but rather groups of MLS districts. The limits of the Montréal Metropolitan Area are those used by Statistics Canada for the 1991 census, and this area covers only a portion of the territories served by the GMREB and CMHC in their business operations.

Active MLS® Listings

When properties are listed on the GMREB's Multiple Listing Service, their features and selling price are made available to all brokers and agents who are members of the GMREB and the MLS®. Active listings are those listings which are active on the MLS® on the last working day of every month. The number of active listings for a given quarter corresponds to the average number of listings during the three months of that quarter.

MLS® Sales

These are the sales closed through the GMREB's Multiple Listing Service. Properties that sold for under \$30,000 and those for which the selling price is unknown are excluded from the statistics.

Average MLS® Prices

This figure corresponds to the average value of the transactions and does not necessarily indicate the market value of the properties. Given that the features of properties sold can vary from one quarter to another, the average price constitutes an indicator, not an accurate measure, of the changes in property values.

Notes on Tables and Graphs

Difference Between Listing and Selling Prices

This is the difference between the selling price and the original listing price of the last sales mandate registered by a real estate agent. This figure does not reflect any price that may have been requested by a seller under a previous sales mandate signed with another agent. In a buyer's market, where asking prices are revised downwards, this statistic underestimates the real difference between the selling prices and the prices originally requested by sellers.

Average Listing Period

The listing period is calculated from the first listing date of the last registered sales mandate. Here again, this figure does not reflect any time that the property may have been listed under a previous sales mandate with another agent. Consequently, the average listing period underestimates the actual time that properties are on the market before they are sold, but it remains a useful and reliable indicator of changes in the state of the market.

Number of Sellers per Buyer

This is a measure of the number of properties for sale for every unit sold during a given month, providing an indication of the state of the market based on supply and demand conditions. Due to the differing seasonal characteristics of sales and listings, this statistic is calculated in the following manner: the monthly average of active listings in the last 12 months is divided by the monthly volume of sales during the same 12-month period.

Seasonally Adjusted Annual rates

These figures indicate the annual level of activity that would be achieved if the pace recorded during a quarter were maintained over four consecutive quarters. Since the rates are seasonally adjusted, i.e. seasonal influence has been removed, the figures for any one month or quarter can therefore be compared with those of any other.

Abbreviations

QTR: Quarter

% CHG: Percentage change from one year to the next for corresponding periods.
